Neptune's Discovery

The paragraph below tells about a special event in September history. Can you find and mark ten errors in the paragraph? Look for errors of capitalization, punctuation, spelling, and grammar.

In September 1846, a german astronomer, Johann Galle became the first to observe the planet Neptune. The eighth plant, Neptune is named for the roman god of the Sea. Neptune is about 30 times farther from the sun then planet earth is. It is also large than our planet. Sometimes Neptunes orbit crosses that of Pluto;
