## Apple II Personal Computer

The paragraph below tells about an important date in April. Can you find and mark ten errors in the paragraph? You might look for errors of capitalization, punctuation, spelling, or grammar.

Before the iPhone and the iPad there was the Apple II personal computer. Designed by Steve Wozniak, with help from fellow co-founder Steve Jobs, the 8bit system revolutionized the home computer market. The system came with a key board and color monitor. Most PCs did not include these addons at the time. The cheapest Apple II model cost a round \$1,300. It made it's debut at a technology fare on April 16, 1977. The Company continued producing the line until 1993. Over 5 million units were sold making it Apples' first breakthrough product.
