

## Structure of Insect

Look at the diagram of an insect's body, read about it and then answer the questions.

Insects all have three parts. The head, thorax and abdomen. Some insects also have wings. The wings and legs are attached to the thorax. Insects have at least one set of antennae. The antenna are what the insect uses to feel. The abdomen has the insect's stomach. Some types of insects are butterflies, ants, bees and flies.

1. How many parts does an insect have? \_\_\_\_\_

2. What are the three parts of an insect? \_\_\_\_\_

\_\_\_\_\_

3. What part of the body are the legs and wings attached to? \_\_\_\_\_

4. Give three examples of different types of insects. \_\_\_\_\_
