

Stars

Read about stars and then answer the questions.

Stars are huge, glowing balls of gas. Most of the gas is called hydrogen. The middle of the star is very hot. The Sun is the closest star to Earth. There are billions of stars in the night sky.

Most stars are very far away. Stars are found in huge groups called galaxies. The Sun and Earth are part of the Milky Way galaxy.

1. What star is closest to Earth? _____

2. How many stars are there? _____

3. What groups are stars found in? _____

4. Draw a picture of what you think the Milky Way galaxy looks like.
